1.2	13 September 2026	Final revision	Project Team

Preface

This Software Requirements Specification (SRS) document describes the requirements for the School Event Management System of Iloilo State University of Fisheries Science and Technology. It follows the structure provided in the supplied SRS template.

The proposed system is intended to provide a centralized platform for planning, organizing, publishing, registering for, and monitoring school events. It is designed to reduce manual event-management activities and make event information easier to access for authorized users and participants.

This document serves as a guide for the project team, adviser, administrators, event organizers, faculty and staff, and students who will participate in the development, evaluation, and use of the system.

1. Introduction

1.1. Purpose

The purpose of this Software Requirements Specification is to define the functional and non-functional requirements of the School Event Management System. The system will provide a centralized and organized way to manage school events, including event creation, approval, scheduling, participant registration, announcements, attendance monitoring, and report generation.

The document establishes a common understanding between the project team and stakeholders regarding what the proposed system should do and the conditions under which it should operate.

1.2. Scope

The School Event Management System is a web-based information system intended for use within the university. It will allow authorized administrators and event organizers to create and manage events, while students and other authorized participants can view event information and register for available activities.

The system will cover event proposal and approval, event details and schedules, participant registration, announcements, attendance recording, user account management, searching and filtering of events, and generation of basic event-related reports.

The system will not replace financial accounting, official academic records, or external event-management platforms. Functions outside the defined school-event workflow are excluded from the initial scope.

1.3. Definitions, Acronyms and Abbreviations

SRS – Software Requirements Specification

SEMS – School Event Management System

Administrator – Authorized user responsible for managing the system and its users.

Event Organizer – Authorized user responsible for proposing and managing school events.

Participant – Student, faculty, staff, or other authorized person who registers for an event.

Event – A scheduled school activity managed through the system.

Registration – The process by which a participant signs up for an event.

Attendance – A record indicating that a registered participant attended an event.

1.4. References

The structure and section organization of this document are based on the SRS template supplied for the project. The template contains sections for the introduction, overall description, specific requirements, appendixes, and index. □filecite□turn0file0□L16-L49□

Additional project-specific requirements in this document are proposed based on the stated system title, School Event Management System, and are intended for validation by the project stakeholders.

1.5. Overview

Section 1 introduces the system and defines its purpose and scope. Section 2 provides the overall description, including the product perspective, functions, users, constraints, assumptions, and dependencies. Section 3 specifies the external interfaces, functional requirements, performance requirements, design constraints, software attributes, and other requirements. Section 4 contains appendixes, while Section 5 provides the index

2. Overall Description

2.1. Product perspective

The School Event Management System will function as a centralized web-based application for school-event information and processes. It will maintain event records, user accounts, registration information, announcements, and attendance records in a database.

The system is intended to reduce dependence on separate spreadsheets, paper forms, social-media posts, and manual lists by providing one platform for the main event-management activities.

2.2. Product functions

- User registration and secure login.
- Role-based access for administrators, event organizers, and participants.
- Creation, editing, submission, approval, and publication of event information.
- Event calendar and schedule viewing.
- Online participant registration and registration-status viewing.
- Event announcements and notifications.
- Attendance recording and monitoring.
- Search and filtering of events.
- Generation of basic participant, attendance, and event reports.
- Management of user accounts and system records by authorized administrators.

2.3. User characteristics

User	Description	Main Responsibilities
Administrator	System administrator with full authorized access.	Manage accounts, events, approvals, records, reports, and system settings.
Event Organizer	Authorized faculty, staff, or organization representative.	Create event proposals, update event information, manage participants, announcements, and attendance.
Student/Participant	Registered system user who participates in school events.	View events, register, receive event information, and view registration status.
Faculty/Staff	Authorized university	View event information,

personnel who may
participate or assist in
events.

register when applicable,
and participate in assigned
activities.

2.4. Constraints

The system requires a compatible web browser and network or internet connection for normal operation.

- Only authorized users may access administrative and organizer functions.
- Event information and participant records must be handled according to applicable university policies.
- The initial version is limited to the features defined in this SRS.
- System performance depends partly on available network, hosting, and database resources.

2.5. Assumptions and dependencies

Users will have valid accounts and appropriate roles.

Authorized personnel will provide accurate event details.

The university will provide or approve the required hosting and database environment.

Users will have access to a supported browser and network connection.

Event organizers and administrators will maintain event information and attendance records.

3. Specific Requirements

3.1. External interface requirements

3.1.1. User interfaces

- The login page shall provide fields for user credentials and an option to submit authentication information.
- The dashboard shall display functions appropriate to the user's role.
- The event page shall display the event title, description, date, time, venue, organizer, registration status, and other relevant information.
- The registration interface shall allow eligible users to register and view their registration status.
- The administrator and organizer interfaces shall provide forms for creating and updating event information.
- The system shall provide clear messages for successful operations, validation errors, and failed actions.

3.1.2. Hardware interfaces

The system does not require specialized hardware for normal use. It may be accessed using desktop computers, laptops, tablets, or smartphones capable of running a supported web browser. Attendance may optionally be recorded using a device capable of accessing the attendance interface

3.1.3. Software interfaces

- A web browser such as Google Chrome, Mozilla Firefox, Microsoft Edge, or another supported modern browser.
- A relational database management system for storing user, event, registration, and attendance records.
- A web server or cloud hosting environment capable of running the system application.
- Optional email or notification services may be integrated for event-related notifications.

3.1.4. Communications interfaces

4. The system shall communicate through standard web protocols over a network connection. Secure communication using HTTPS should be used when the system is deployed. Database communication shall be handled by the application server and shall not be directly exposed to ordinary users.

4.1. Functional requirements

3.2.1. User Authentication and Account Management

- The system shall allow users to log in using valid credentials.

- The system shall restrict access to functions according to the user's assigned role.
- The administrator shall be able to create, update, deactivate, and manage user accounts.
- The system shall prevent unauthorized access to protected pages.
- The system shall allow users to log out securely.

3.2.2. Event Creation and Management Performance Requirements

- Authorized organizers shall be able to create an event proposal.
- The event form shall allow entry of event title, description, date, time, venue, organizer, capacity, registration period, and other required information.
- Organizers shall be able to edit event information before or after approval according to their permissions.
- The system shall maintain event status such as Draft, Pending Approval, Approved, Published, Completed, or Cancelled.
- Administrators shall be able to view and manage all event records.

3.4. Design constraints

The system shall follow the approved university project scope and development standards.

- The interface should be responsive for common desktop and mobile screen sizes.
- The database shall use appropriate relationships and constraints to preserve data integrity.
- Access to sensitive administrative functions shall be controlled by authentication and authorization.
- The system shall avoid collecting information that is not necessary for the defined event-management functions.

3.5. Software system attributes

3.5.1. Security

The system shall authenticate users and enforce role-based authorization. Passwords shall not be stored in plain text. Administrative functions shall only be available to authorized users.

3.5.2. Usability

The system shall use clear navigation, readable labels, consistent forms, and understandable error messages. Common tasks such as viewing an event and registering should require only a reasonable number of steps.

3.5.3. Reliability

The system should preserve stored event, registration, and attendance records during normal operation. Appropriate validation shall be applied to reduce invalid or incomplete data.

3.5.4. Maintainability

The system should be organized into maintainable components, with documented database structures and source code that can be updated by authorized developers.

3.5.5. Availability

The system should be available during periods when school event information and registration services are expected to be used, subject to approved maintenance and hosting availability.

3.6. Other requirements

- The system shall provide appropriate validation for required fields.
- The system shall maintain timestamps or equivalent records for important transactions where practical.
- The system shall support backup and recovery procedures appropriate to the university's hosting environment.
- Any future integrations, such as QR-code attendance or email services, shall be implemented only after their requirements are approved.

5. Appendixes

Appendix A – Proposed User Roles

Administrator, Event Organizer, Student/Participant, and Faculty/Staff.

Appendix B – Proposed Main Modules

- Authentication and User Management
- Event Management
- Event Approval
- Event Registration
- Announcements and Notifications
- Attendance Monitoring
- Reports
- Search and Filtering

Appendix C – Future Enhancements

- QR-code-based attendance
- Email or SMS notifications
- Calendar synchronization
- Event feedback and evaluation
- Automated certificates of participation
